

Download MotiveWave Package

A pre-compiled .jar file which can be imported into MotiveWave to use the cycle tools.

Please download and install the latest attached wttcycles_XXX.jar file into your MotiveWave folder (see below).

Update 29. May 2021: Version 1.1 (v11) is available with the cRSI Auto indicator.

Update 31. July 2021: [wttcycles_v12.jar](#) is available:

- * Added Data Uploader to push datasets to the cycle application for analysis.
- * Added Composite Vector Plot to export composite cycles from the cycles app and plot as indicator on MotiveWave chart.

Update 5. Feb. 2022: [wttcycles_v13.jar](#) is available

- * Added option to change the API endpoint for indicators to use with local desktop cycles app (pro only)

The cRSI Auto indicator automatically pulls the dominant cycle and uses the cycle length to set the cRSI up. This removes the need to adjust the cRSI length manually again and again if the dominant cycles changes. This version was introduced first in our live webinar on 29. May 2021. Please review this session for more details.

If you install the JAR file, please **ensure to remove and old wttcycles_vXX.jar file from your folder!**

MW does not automatically remove old wttcycles.jar files which might cause issues if you don't remove them manually. Check the extension folder as shown in the MotiveWave documentation that you only have the latest JAR file from us in this folder:

[MW_Extensions_Folder.jpg](#)

The package includes the following studies:

- Dynamic Cycle Explorer
- Cycle Swing Index
- cyclic-smoothed RSI
- cyclic-smoothed RSI Auto (v 1.1)

- Anchor Point (v 1.1)

MotiveWave Cycle Tools

Chart: MotiveWave chart with [WhenToTrade](#) cycle indicators
